

Solidified Remains You Can Hold

Receive 100% of the remains as "stones" and give your family a healing sense of connection.

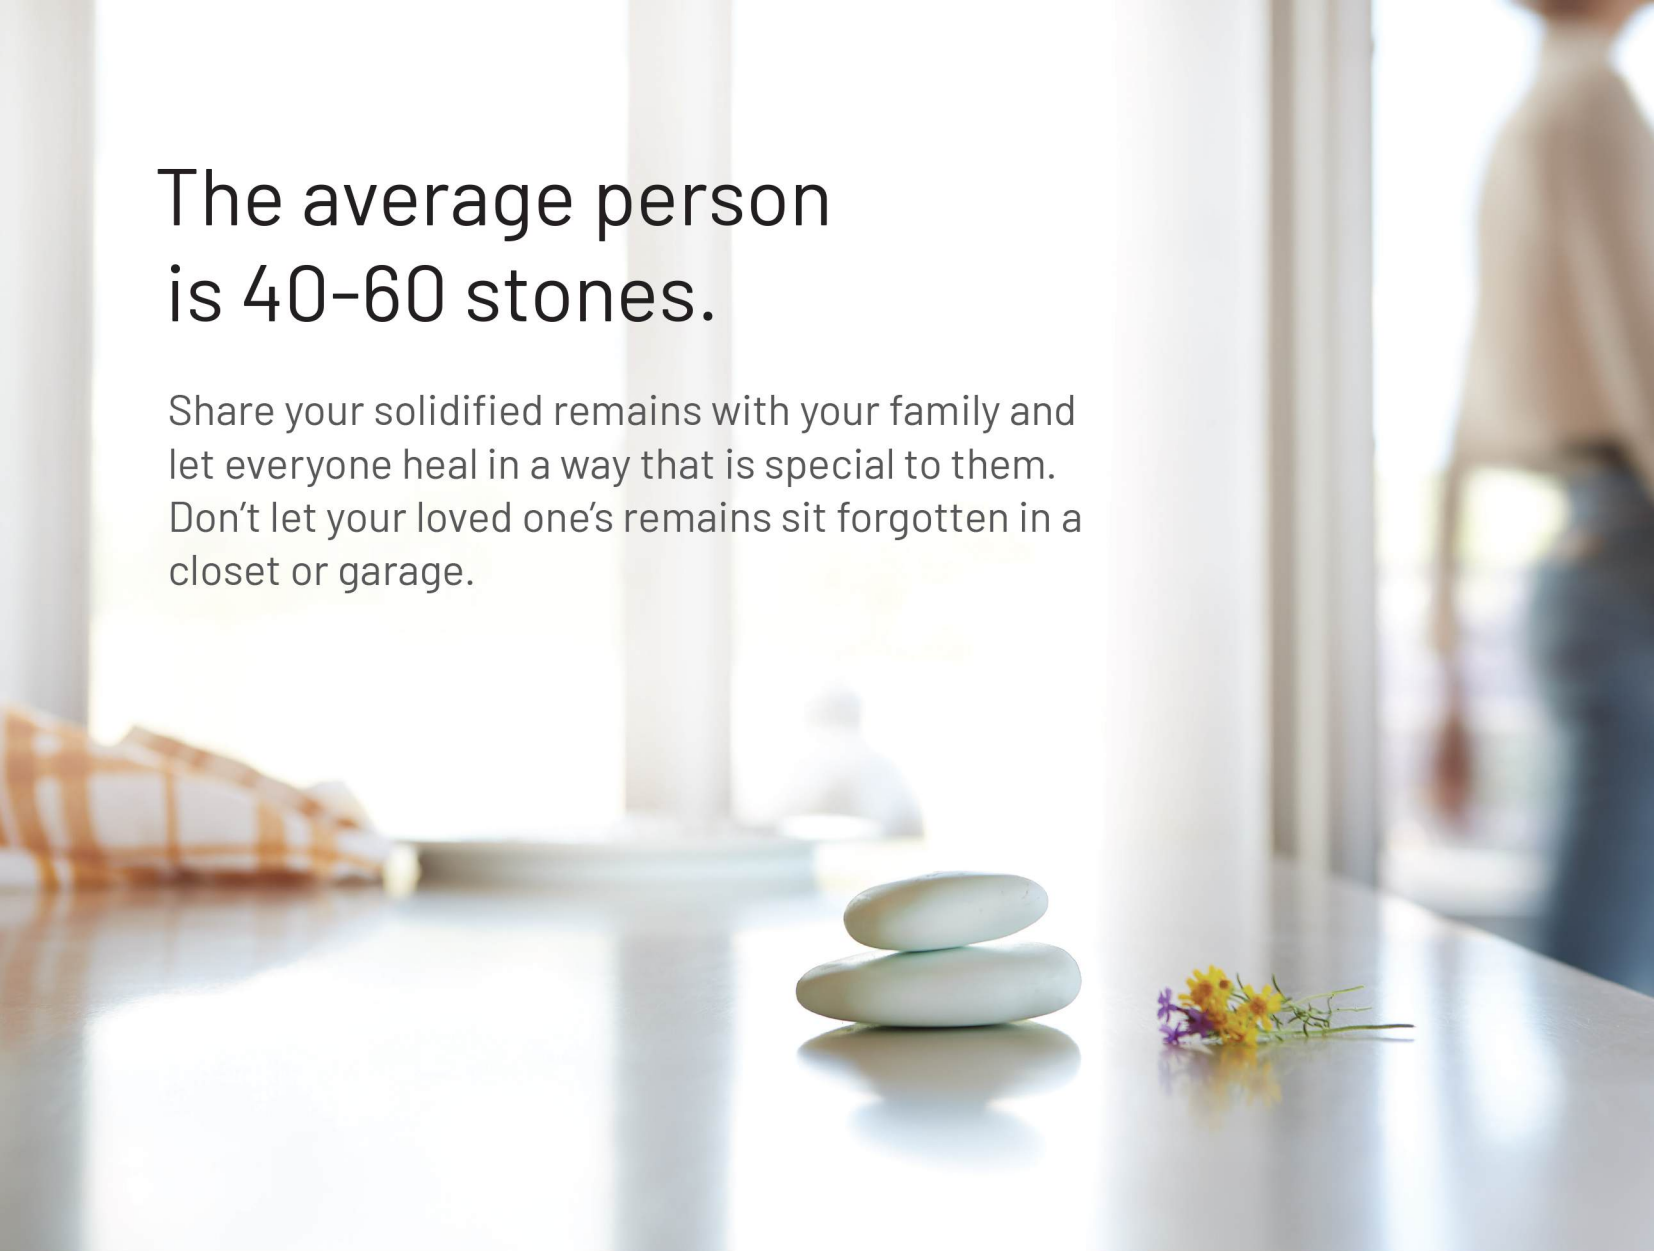

Remains that feel meaningful

Solidified remains let you feel close and connected to your loved one in daily life.

The average person is 40-60 stones.

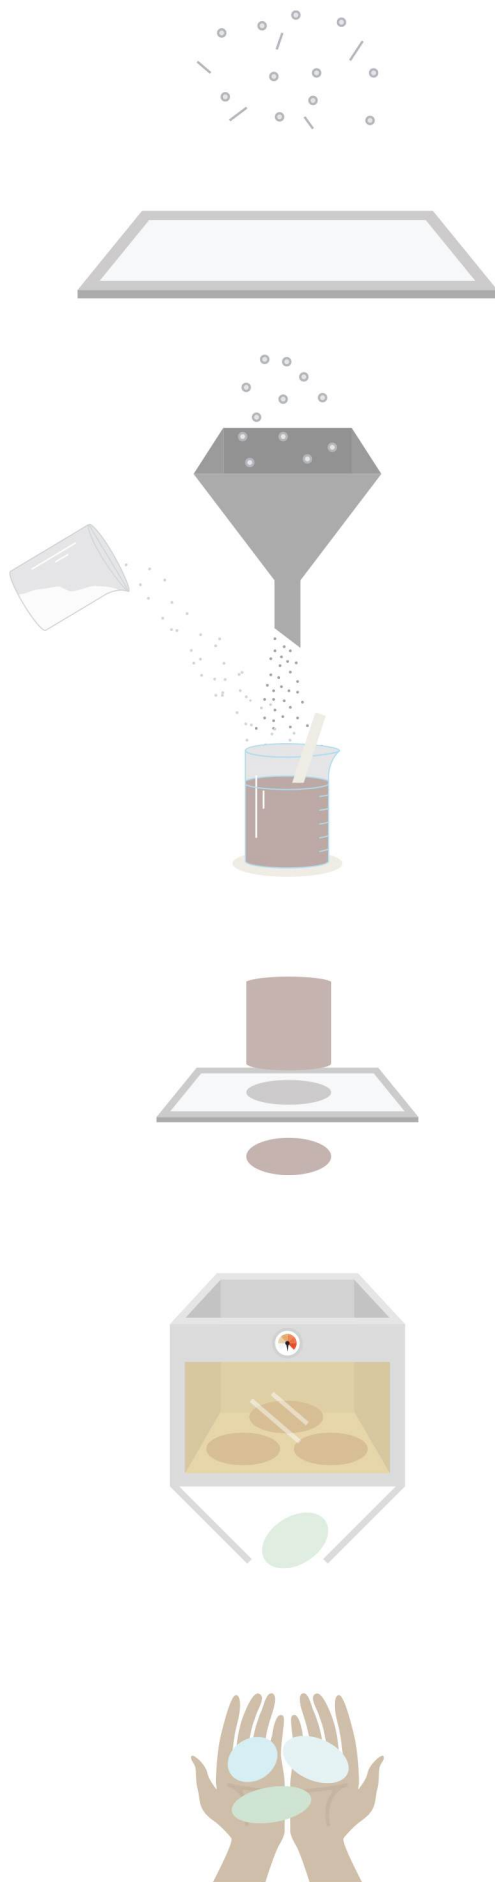

Share your solidified remains with your family and let everyone heal in a way that is special to them. Don't let your loved one's remains sit forgotten in a closet or garage.

What color are your stones?

The appearance of each collection of solidified remains is 100% natural. People can result in different hues and textures making each stone uniquely beautiful.

The Science

Parting Stone® Solidified Remains

Step 1: Refinement

We remove foreign contaminants like staples and screws from the cremated remains. The granule "ash" is refined into a powder.

Step 2: Stone Forming

A small amount of binder is added to the ash, the remains are mixed into a clay-like material, and the stones are formed.

Step 3: Solidification

The stones are heated in a kiln giving the solidified remains their hardness and permanence.

Step 4: Return Home

Finished solidified remains are cleaned and polished. Your stones are ready to come home and be shared with family and friends.
